

# **Homeworks-Lawyer-online**

*Release 0.0.1*

**Roksoliana Onyshkiv**

травень 19, 2020

Python Module Index	3
Index	5

Module of realisation choice relevant information in articles

```
class choicing_relevant_information_in_articles.Article ( number: int, name: str,  
punkt1=None, punkt2=None, punkt3=None, punkt4=None, punkt5=None, punkt6=None, punkt7=None,  
punkt8=None )
```

Class of articles

```
find_synonyms ( relevant_words_list ) → set
```

Returns list of synonyms and this words, that can be relevant to each article

```
relevant_information_in_name ( ) → list
```

Choising relevant information in name of articles This words will be in self.relevant\_name

```
relevant_information_in_punkts ( ) → list
```

Choising relevant indormation in each punkts of articles This words will be in self.relevant\_point(number)

```
synonyms_check ( set_syn ) → list
```

Check are all word in synonyms set ukrainian

```
transalte_name ( ) → None
```

Translates name into english in order to use later Natural language Google Api. This information will be in self.translated\_name

```
translate_punkts ( ) → None
```

Translates punkt into english in order to use later Natural language Google Api.

Realization usersituation upworking

```
class read_save_input.UsersSituation ( data=None, category=None, result=None )
```

Class of users situations

```
choicing_relevant_information_from_situation ( ) → None
```

Chose relevant information from situation discription

```
find_articles ( user_word_set )
```

Find articles ro situations

```
find_persons ( )
```

Finds main persons in situation

**find\_synonyms** ( *relevant\_words\_list* ) → set  
Returns list of synonyms and this words, that can be relevant to each article

**history\_user\_write** ( ) → None  
Creates file for current user history with his situation

**read\_users\_situation** ( *filename: str* ) → str  
Reads users\_situation from excel file. Returns users situation

**saves\_result** ( *filename1: str, filename2: str* ) → None  
Writes result to users\_history and to result

**synonyms\_check** ( *set\_syn* ) → list  
Check are all word in synonyms set ukrainian

**translate\_situation** ( ) → None  
Translates situation into english

Running web application

**run.index** ( )  
Running start.html

**run.pars\_urls** ( )  
Saving result from form

Module of reading tasks in 1.csv

**class samples.Samples** ( *file\_name: str* )  
Class of Book

**choising\_relevant\_rows** ( *param: str* ) → pandas.core.frame.DataFrame  
Choices needed rows from file and write that indexes in list Returns list of indexes

**choising\_sentences** ( *indexes\_list: list, df\_for\_using: str* ) → list  
Choices sentences to task and returns list of strings of sentences to each tasks

**creating\_df\_for\_result** ( *df\_for\_using: str* ) → pandas.core.frame.DataFrame  
Creates dataframe for result and returns it

**creating\_samples\_df** ( *df\_user: str, punkts: list* ) → pandas.core.frame.DataFrame  
Creates dataframe where each task has all its sentences

**save\_samples** ( ) → None  
Creates excel file with result

**situation\_sample\_read** ( ) → list  
Reads all rws from book. Returns list of rows

## C

choicing\_relevant\_information\_in\_articles,  
??

## r

read\_save\_input,1  
run,2

## S

samples,2

## A

Article (class in choicing\_relevant\_information\_in\_articles), 1

## C

choicing\_relevant\_information\_from\_situation()  
(read\_save\_input.UsersSituation  
method), 1

choicing\_relevant\_information\_in\_articles  
module, 1

choicing\_relevant\_rows() (samples.Samples  
method), 2

choicing\_sentences() (samples.Samples method),  
2

creating\_df\_for\_result() (samples.Samples  
method), 2

creating\_samples\_df() (samples.Samples  
method), 2

## F

find\_articles() (read\_save\_input.UsersSituation  
method), 1

find\_persons() (read\_save\_input.UsersSituation  
method), 1

find\_synonyms() (choicing\_relevant\_informa-  
tion\_in\_articles.Article method), 1

find\_synonyms() (read\_save\_input.UsersSitua-  
tion method), 2

## H

history\_user\_write() (read\_save\_input.UsersSitua-  
tion method), 2

## I

index() (in module run), 2

## M

module

choicing\_relevant\_information\_in\_articles, 1

read\_save\_input, 1

run, 2

samples, 2

## P

pars\_urls() (in module run), 2

## R

read\_save\_input  
module, 1

read\_users\_situation() (read\_save\_input.UsersSit-  
uation method), 2

relevant\_information\_in\_name() (choicing\_rele-  
vant\_information\_in\_articles.Article  
method), 1

relevant\_information\_in\_punkts() (choicing\_rele-  
vant\_information\_in\_articles.Article  
method), 1

run

module, 2

## S

samples

module, 2

Samples (class in samples), 2

save\_samples() (samples.Samples method), 2

saves\_result() (read\_save\_input.UsersSituation  
method), 2

situation\_sample\_read() (samples.Samples  
method), 2

synonyms\_check() (choicing\_relevant\_informa-  
tion\_in\_articles.Article method), 1

synonyms\_check() (read\_save\_input.UsersSitua-

tion method), 2

## T

transalte\_name() (choicing\_relevant\_informa-  
tion\_in\_articles.Article method), 1

translate\_punkts() (choicing\_relevant\_informa-  
tion\_in\_articles.Article method), 1

translate\_situation() (read\_save\_input.UsersSitu-  
ation method), 2

## U

UsersSituation (class in read\_save\_input), 1
